

Instructions for use

Neutralisier

The Neutralisier is used to neutralise waste water and is designed for fully automatic operation of the PH Neutraliser manufactured by REUTER

- Please refer to the safety data sheet.
- The neutraliser must not be transported or stored together with acids. It is not suitable for neutralising electrochemically cleaned weld seams.
- The neutraliser is a consumable for the pH neutralisation system (EP-06-220).
- It must not come into uncontrolled contact with waste water.
- The neutraliser may only be used in maintained neutralisation systems manufactured by Reuter. Maintenance of the system must have been carried out by Reuter or a trained Reuter partner.
