

Instructions for use

Stainless Care Spray

The practical stainless steel care spray is particularly suitable for the daily basic care of matt and polished surfaces indoors and outdoors. We also recommend using it AFTER more intensive cleaning. The light cleaning effect of the spray does not attack the fresh passivation, produces a uniform light shine, has an antistatic effect and protects against fingerprints.

- Stainless Care is a high-quality stainless steel care spray for cleaning, maintaining and providing long-term protection for matt and polished stainless steel surfaces, both indoors and outdoors. The product gently removes fingerprints, grease films, light soiling and limescale residues without scratching or damaging the surface.
- At the same time, Stainless Care forms a fine protective film on the surface. This has an antistatic effect, makes future cleaning easier and protects the stainless steel from further soiling.
- Spray the product sparingly onto the dry and clean surface and then spread it evenly with a soft cotton cloth. On brushed stainless steel surfaces, the product should always be worked in the direction of the brush marks to maintain a uniform appearance.
- **Important note:** Stainless Care must not be used on work surfaces that come into direct contact with food.
